## SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

(Deemed to be University u/s 3 of UGC Act, 1956)

Kattankulathur, Chengalpattu District 603203, Tamil Nadu, India

Course	21MEC201T Course	ENGINEERING THERMODYNAMICS	Course	PROFESSIONAL CORE	L	Т	Р	С	
Code	Name	ENGINEERING THERMODYNAMICS	Category	PROFESSIONAL CORE	3	0	0	3	

Pre-requisite Courses	Ni	Co- requisite Courses	Nil	Progressive Courses		Nil
Course Offeri	ng Department	Mechanical <mark>Engineering</mark>	Data Book / Codes	/ Standards	Nil	

Course L	earning Rationale (CLR):	The purpose of learning this course is to:	-24			Ī	Progr	am Ou	<mark>itco</mark> me	s (P0	)					rogram	
CLR-1:	utilize the fundamental con	cepts of thermodynamic systems and energy transfer	1	2	3	4	5	6	7	8	9	10	11	12	_	pecific itcome:	
CLR-2:	utilize thermodynamic laws	and th <mark>eir applicati</mark> ons	dge	١.	of	SI	<u>.                                     </u>	1			or Ye		9				
CLR-3:	utilize the evaluation of pro	perti <mark>es of pure</mark> substances and vapor power cycles	wlec	w	/development	estigations roblems	age	ъ			≥		Finand	ng			
CLR-4:	utilize the fundamental con	ce <mark>pts of Psy</mark> chometric processes	Knowle	nalysis	udola	estig probl	Us	er and	م × ح		Team	fion	∞	arı.			
CLR-5:	utilize the evaluation of pro	p <mark>erties of</mark> gas and gas mixtures	ering	₹	deve	t inv	Tool	enginee	nment nability		<u>ه</u>	ommunication	Mgt.	g Le			
		1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	ginee	oblem	ign/ tion	omp	dern	eng etv	ironi	S	ndividual	nun	roject l	Long	7	7-5	-3
Course C	Outcomes (CO):	At the end of this course, learners will be able to:	Eng	Prof	Des	- O	Moc	The	Sus	Ethics	Indi	Sol	Proj	Life	PSO	PSO-2	PSO
CO-1:	apply the concept of ther <mark>m</mark>	odynamic properties to quantify energy transfer	3	3			-	1-5	7 -	-	-	-	-	-	-	-	-
CO-2:	apply thermodynamic la <mark>ws</mark>	to various thermodynamic systems, comprehend Entropy, Availability concepts	3	3	7.7	- 1	-	4	-	-	-	-	-	-	-	-	-
CO-3:	determine the properties of	pure substances and illustrate vapor power cycles	3	3	4	15	-			-	-	-	-	-	-	-	-
CO-4:	apply the fundamentals of I	P <mark>syc</mark> hometric processes and do basic calculations	3	3	De l	4	-	-	-	-	-	-	-	-	-	-	-
CO-5:	determine the properties of	gas and gas mixtures	3	3	_	72	_	-	-	-	0_	_	-	_	_	-	_

#### Unit-1 - Fundamentals and First Law of Thermodynamics

9 Hour

Thermodynamic system, Properties, Quasi-static process, Zeroth law of Thermodynamics, Pdv work for various quasi-static processes, First law of thermodynamics for a closed system, Process and cycle, First law applied to flow processes, Application of SFEE to various steady flow devices.

#### Unit-2 - Second Law and its Applications

9 Hour

Cyclic heat engine, Carnot cycle, Reversed Carnot cycle, Carnot's theorem, Statements of second law and their equivalence - Reversible and irreversible process, Causes of irreversibility, Clausius theorem, Concept of entropy, Entropy generation in Closed systems, Concept of Availability

#### Unit-3 - Steam Generation and Rankine Cycle

9 Hour

Pure substances, Phase change phenomenon of a pure substance, Property diagrams for phase change process, Use of Steam tables, Mollier chart, Rankine cycle, Rankine cycle efficiency, Reheat Rankine cycle and its efficiency, Concept of regeneration in Rankine cycle

#### Unit-4 - Psychrometry

9 Hour

Properties of atmospheric air and Psychrometric chart, Psychrometric processes. Psychrometric processes, Winter air conditioning system, Year-round air conditioning systems, Heat load and simple calculations

9 Hour

Properties of ideal and real gases, Vander Waal's equation of state, compressibility chart, Properties of mixture of gases, Dalton's law of partial pressures, Amagat's law of additive volumes, simple problems, Maxwell's relations, T-ds relations, Clausius - Clapeyron Equation, Joule-Thomson experiment

#### Unit-1 - Phase Diagram and Heat Treatment

9 Hour

Crystal structure, Imperfection in solids, Solid solutions – Types, factors governing solubility rules. Phase diagram – cooling curve, phase rule, types and interpretation. Iron- carbide (Fe-Fe3C) phase diagram, Microstructural aspects and invariant reactions in Fe-Fe3C diagram. Effect of alloying elements on Fe-Fe3C diagram. TTT and CCT diagrams. Various heat treatment and surface hardening process

#### Unit-2 - Elastic and Plastic Behaviour of Materials

9 Hour

Stress Strain relation in elastic and plastic region, Mechanism of plastic deformation – slip and twinning, Slip systems, critically resolved shear stress, Shear strength of perfect and real crystals. Dislocation – climb, interaction, multiplication and pile ups. Strengthening mechanisms – Solid solution, Grain boundary, Dispersion, Precipitation, Fiber, Martensite strengthening, Strain aging and Strain hardening.

#### Unit-3 - Characterization of Materials

9 Hour

Types of fracture in metals, Griffith's theory of brittle fracture, Stress intensity factor, Fracture toughness, Theory of Ductile to brittle transition. Creep – Creep curve, mechanism of creep deformation. Fatigue - S-N curve, low and high cycle fatigue, stages of fatigue. Sources of failure, Procedure of failure analysis. Hardness: Rockwell, Brinell, Vickers hardness, Nano-Indentation Technique. Introduction to characterization of materials - XRD, SEM and TEM.

#### **Unit-4 - Properties of Advanced Materials**

<del>3 110u</del>

Properties of plain carbon steel, Tool steel, Stainless steel, Cast iron. Need of microalloying, HSLA steel - Dual phase steel, TRIP steel. Aluminium alloys – classifications, properties, applications, Titanium alloys. Polymers – Types, Properties and applications of PE, PP, PVC. Ceramics – Types, Properties and applications of Al2O3, ZrO2, SiC. Composites – classification, Reinforcement and matrix material, Rule of Mixture. Properties and applications of MMC, CMC and PMC. Functionally graded materials.

#### Unit-5 - Futuristic Materials and Computational Materials Design

Learning

Resources

9 Hour

Smart materials – Types, Shape memory alloys. Nanomaterials: Carbon nanotubes, Graphene – properties and applications. Metallic foams, Metallic glasses, Super alloys, High entropy alloys, biomaterials, Multiscale materials modelling. Integrated Computational Materials Engineering with application to Industry 4.0. Materials Informatics, Machine learning for design of materials, Property Optimization

#### Unit-1 - Metal Casting and Forming Technology

9 Hour

Introduction to casting, Patterns: Types and Materials-Types of Allowances and Moulding sand-Gates and Risering system-Numerical on Riser design- Special Casting Process - Die casting, Centrifugal Casting-Introduction to hot and cold working-Types of forging, Types of extrusion-Types of roll mills- Wire drawing-Sheet metal operation-Blanking, punching, stretch forming, bending, cup drawing, Embossing and coining-Numerical on bending and blanking

#### Unit-2 - Metal Cutting and Machine Tools

9 Hour

Orthogonal and oblique cutting - Classification of cutting tools: single, multipoint - Tool signature for single point cutting tool - Mechanics of orthogonal cutting - Numerical on Merchant Circle - Tool wear and tool life: Simple problems - Cutting Fluids- Gear Manufacturing and Generation Processes - Types of milling (up and down milling)-Computer numeric control (CNC) machine: Types and components - Types of grinding: Surface, Cylindrical and Center less Grinding

#### Unit-3 - Welding and Additive Manufacturing

9 Hour

Classifications of Welding Processes -Types of Welding Processes: Gas Metal Arc Welding, Cold metal transfer (CMT) welding, Spin Arc welding process, Laser welding, Friction welding process-Simple problems in welding-Basic Solidification Concepts and Grain structures in weld-Inspection and Testing Methods. Need and Development-Principle, working and applications of Additive Manufacturing process: Fused deposition Modelling (FDM), Laminated Object Manufacturing (LOM), Selective Laser Sintering (SLS) and Laser Engineered Net Shaping (LENS).

#### Unit-4 - Introduction to Metrology and Measurement of Various Elements

9 Hou

Introduction to metrology, Need for inspection- Sources and types of errors- Precision and accuracy-Classification of measuring instruments- Standards of measurements, Calibration Comparators: Types and need, Mechanical (Sigma) and Electrical- Measurements of various elements of threads: Major, minor diameters and pitch-Measurement of effective diameter: two wire methods, best size wire and tutorials - Measurements of tooth thickness of gear by gear tooth vernier and tutorials- Circular pitch and composite error measurement-Surface roughness parameters- surface finish measuring instruments- Methods of evaluation of surface finish and simple problems in roughness evaluation

#### Unit-5 - Co-Ordinate Measuring Machine and Optical Metrology

9 Hour

Introduction to coordinate metrology- Types and construction of CMM- Components of CMM: Bearings, Drive systems, Transducers, Probes- measuring accuracy, causes of errors and calibration of CMM-Application of laser scanning CMM in reverse engineering- Principle of light wave interference- Types of interferometers: Michelson, NPL flatness and Laser interferometer-Measurement of straightness, flatness using Autocollimator- Machine vision: Image processing technique

#### Unit-1 - Profile Turning Using Center and CNC Lathe

6 Hour

Lathe- Step turning and chamfering- tape<mark>r turning</mark> by compound rest/offset - drilling, external thread cutting and internal thread cutting. CNC lathe -plain and step turning- peck drilling, boring and external thread cutting - profile turning using canned cycles

#### Unit-2 - CNC Contour Milling and Gear Manufacturing

6 Hour

Milling machine -Spur gear cutting Hobbing machine-Helical gear cutting CNC Milling center- Straight and contour milling -Circular and square pocketing - operations using Mirror cycle and canned cycles. Additive

#### Unit-3 - Surface, Cylindrical Grinding and Friction Welding Process

6 Hour

Tool and cutter grinding- Surface grinding in grinding machine - Cylindrical grinding- cutting tool edge grinding - Friction Welding

#### Unit-4 - Profile Measurements Using Profile Projector and Machine Vision

6 Hour

Basic Measuring Instruments, Angular Measurements using sine bar-sine center apparatus and tool makers microscope, Optical Instruments- Profile Projector, Machine Vision

#### Unit-5 - Geometric, Form and Surface Measurements Using CMM and Quality Control

6 Hour

Geometric Measurements - calibration of measuring Instruments, Form Measurements using mechanical & electrical Probe; Surface roughness measurements using surface roughness tester, 3D measurements using coordinate measuring machine. Process control charts.

#### Unit-1 - Fluid Properties and Fluid Statics

9 Hour

Types of fluids, Properties of fluid, Dynamic and Kinematic viscosity - Newton's law of viscosity- Surface tension and capillarity- Bulk modulus of elasticity and compressibility, Fluid statics: Pascal's law, Hydrostatic law, Buoyancy and Meta centre, Pressure, Manometers - Piezometer- Applications and limitation - U-Tube, Single column, Differential U-tube, Inverted differential U-tube manometers.

#### Unit-2 - Fluid Kinematics and Dynamics

9 Hour

Types of fluid flow, Lagrangian and Eulerian approach, Velocity and acceleration of fluid particles- Continuity equation- Euler equation of motion-Bernoulli's equation- Applications - Venturimeter- Orificemeter -Pitot tube-Nozzle flow meter- Types of flow lines, Stream line-Streak line and Path line-Impulse Momentum equation.

#### Unit-3 - Dimensional Analysis and Flow Through Pipes

9 Hour

Dimensions, Dimensional homogeneity-Buckingham's pi theorem-Model analysis-advantages and applications-similitude, Dimensionless numbers-Model laws- Reynold's, Froude, Weber, Mach, and Euler model laws, Concept of fully developed pipe flows - Darcy equation – Major and minor losses-Pipes connected in series and parallel-Equivalent pipe.

#### Unit-4 -Boundary Layer and Flow Around Submerged Bodies

9 Hour

Flow over flat plate - Laminar and turbulent bounda<mark>ry layers - V</mark>on Karman momentum integral equation - Boundary layer thickness – Displacement, momentum and energy thickness - Forces exerted by a flowing fluid on a stationary bluff and streamlined bodies -Separation of flow over bodies - Development of lift and drag forces.

#### Unit-5 - Hydraulic Machines

9 Hour

Pumps and turbines - Classification - Centrifugal and reciprocating pumps - Working principle - Design parameters - Velocity triangle - Performance curves - Pelton turbine, Francis turbine and Kaplan turbine, - Working principle - Design parameters - Velocity triangle - Performance curves - Cavitation in pumps and turbines.

Unit-1 - Kinematics of Mechanisms 9 Hour

Introduction to mechanism: Link, pair, kinematic chain, mechanism and machine - Degrees of Freedom - Mobility - Four Bar Chain, Grashof's law, Kutzback's and Grubler's criterion for planar mechanisms - Kinematic Inversions of kinematic chain, Kinematic Analysis: Velocity and acceleration analysis of Four bar and single slider crank mechanism by graphical method - Instantaneous center (IC) method, Kennedy's theorem, Velocity analysis of Four bar and single slider crank mechanism by Instantaneous center method

#### Unit-2 - Kinematic Analysis of Machine Elements

9 Hour

Cams and Followers: Cam terminology, types of cams and followers, Types of follower motion - Kinematics of follower for parabolic, simple harmonic, uniform acceleration and cycloidal motions - construction of circular cam profile for radial and offset followers with different follower motions Gears: Gear terminology, types of gears - law of gearing - path of contact, arc of contact, sliding velocity - interference and undercutting of gears - Gear trains: types and applications - velocity ratio calculations in simple, compound and epicyclic gear train

#### Unit-3 - Force Analysis

9 Hour

Applied and Constrained Forces – Free body diagrams – Static Equilibrium conditions – Two, Three and four force members – Static Force analysis in simple machine members – Dynamic Force Analysis – Inertia Forces and Inertia Torque – D'Alembert's principle – superposition principle – dynamic force Analysis in reciprocating engines - Turning moment diagrams - flywheels- Case study on four bar mechanism

#### Unit-4 - Balancing and Gyroscope

9 Hour

Balancing of rotating masses: Static and dynamic balancing of several masses rotating in same and different planes by analytical and graphical methods - Balancing of reciprocating masses by graphical method.

Gyroscopic Gyroscopic forces, couple, precessional angular motion, Gyroscopic effects on automobiles, trains, aeroplane and ship

#### Unit-5 - Fundamentals of Vibrations

9 Hour

Basics of vibrations - Terminology and types of vibrations - Governing equations for free undamped and damped vibrations of single degree of freedom system - logarithmic decrement. Forced vibration: Types of - of forced vibration single degree of freedom system under harmonic excitation.

Unit-1 - Air Standard Cycles

Air standard cycles - Otto, Diesel, Dual and Brayton-- Air standard efficiency - Mean effective pressure - Comparison between cycles - Concept of reheat and regeneration for Brayton cycle.

#### Unit-2 - Fuel Combustion and IC Engines

12 Hour

Fuels – types and properties -- air fuel ratio - volumetric and gravimetric analysis - Analysis of exhaust and flue gas – Calorimetry. IC engines - classification, Working of two stroke and four stroke engines – Measurement of engine operating parameters, Engine performance and Heat balance sheet.

#### Unit-3 - Boilers and Heat Exchangers

12 Hour

Boiler –classification- Mountings and accessories – High pressure boilers – requirements – Working of Lamont, Loeffler, Benson and Velox boiler, fluidized bed boiler, Waste heat recovery boiler, sub critical and super critical boilers – Boiler performance- Equivalent evaporation- Factor of evaporation – Boiler efficiency, Function, types and working of condensers, Economiser, Air preheater, super heater

#### Unit-4 - Air Compressor

12 Hour

Air compressor - classification, working of reciprocating air compressor with and without clearance - Equation for work on single stage compressor - Volumetric efficiency and Free air delivered - Multistage compression with intercooler, Positive rotary compressors - working- Comparison between reciprocating and rotary compressor.

#### Unit-5 - Refrigeration and its Applications

12 Hour

Vapor compression refrigeration system and its working principle – Refrigerants – Eco-friendly refrigerants, Analysis of vapor compression refrigeration cycle- theoretical and actual cycles - Sub-cooling and superheating - Vapor absorption refrigeration systems – Li-Br, NH3-water, Adsorption cooling system , Steam jet refrigeration system, HVAC system in automobiles, Thermal processing of dairy and ice plants, thermal comfort in buildings, thermoelectric refrigeration, Summer, winter and year round air-conditioning system.

#### Unit-1 - Fundamentals of Mechanical Design

9 Hour

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Theories of failure - Design for variable loads: endurance limit, Goodman and Soderberg criteria.

#### Unit-2 - Design of Joints, Couplings and Shafts

9 Hour

Design of joints - Cotter, Knuckle and Bolted joints, Design of couplings - Rigid and flexible couplings-design of shafts

#### Unit-3 - Design of IC Engine Components

9 Hour

Design of Cylinder, Piston with pin and rings, Connecting Rod and Crank Shaft.

#### Unit-4 - Design of Gears

9 Hour

Design of spur, helical, bevel and worm gears from strength and wear considerations.

#### 9 Hour

Unit-5 - Design of Gear Box

Design of multi speed gear box - Requirements of gear box, determination of variable speed range, graphical representation of speeds, structure diagram, ray diagram, selection of optimum ray diagram, estimation of numbers of teeth on gears, layout of gear box.

Unit-1 - Sensors and Transducers 9 Hour

Introduction to sensors and transducers, classification and Static and dynamic characteristics, errors- Principle and working of Resistive, capacitive, inductive transducer-Resonant transducer, Photo electric sensor, Fibre optic transducers, piezoelectric sensor, Ultrasonic sensors- Photo detector-Vision systems

#### Unit-2 - Advanced Sensor Technology

9 Hour

Measurement of Motion, Force, Torque and flow Displacement and speed measurement for translational and rotation systems using potentiometers, LVDT and RVDT, Position Encoder Sensors -Force and Torque measurements using strain gauges and piezoelectric pickups. Flow measurements using Flow meter. Sensor for Identification Bar-Code Identification Systems -Electromagnetic Identification -Optical Character Recognition -Smart sensor/Intelligent sensor Sensors for Faults Diagnosis Sensors Detecting Faults in Dynamic Machine Parts using Surface Acoustic Waves-Sensors for Vibration Measurement of a Structure Microelectromechanical systems (MEMS)

#### Unit-3 – Drives Valves and Actuators for Industrial Automation

9 Hour

Definition, types and selection of Actuators; linear; rotary; Logical and Continuous Actuators, Pneumatic actuator- Electro-Pneumatic actuator; cylinder, rotary actuators, Mechanical actuating system: Hydraulic actuator - Control valves; Construction, Characteristics and Types, Selection criteria. Electrical actuating systems: Solid-state switches, Solenoids, Electric Motors- Principle of operation and its application: D.C motors - AC motors - Single phase & 3 Phase Induction Motor; Synchronous Motor; Stepper motors - Piezoelectric Actuator- Linear Electrical Actuators- Micro Actuators

#### Unit-4 - Controllers and Signal Processing

9 Hour

Programmable Logic Controllers – Architecture – Input / Output Processing – Logic Ladder Programming – Functional Block Programming using Timers and Counters – Applications. A/D converters, D/A converters Multiplexer and Proportional, Integral, Derivative and PID controller- Introduction to Micro controller- Open loop and closed loop control system. Basic signal conditioning – bridges, amplifiers, filters, monitoring and indicating systems and data acquisition systems.

#### Unit-5 – Application of Sensors and Case Studies in Automation

9 Hour

The Roles of Sensors in Industrial Automation- Components of Automation- applications of sensing systems in Automation: Assembly line automation- Testing, Inspection and Quality control, System health Monitoring- Significance of sensors for industry 4.0: Roles, capabilities, and applications

CO-2:	solve the one-dimensional heat conduction problems using numerical methods	7	3		2.7	3	-	4		-	- 1	-	-	-	-	-	-
CO-3:	compute the heat transfer coefficient under free and forced convection in various geometries and sin design of heat exchangers	nple	3	按	Ž.,	3	ı			-	-	-	-	-	-	-	-
CO-4:	examine the surface an <mark>d gas ra</mark> diation for black and grey bodies		3	-	1.0	3	-	-	-	-	-	-	-	-	-	-	-
CO-5:	compute the heat and mass transfer coefficient for phase change process and mass transfer		3		- 1-1	3	-	-	٠.	-	- 1	-	-	-	-	-	-

Unit-1 - Conduction 15 Hour

Modes of heat transfer, General conduction equation- boundary and initial conditions, One Dimensional Steady State Heat Conduction — plane and Composite Systems, Conduction with Internal Heat Generation, Extended Surfaces, Unsteady Heat Conduction — Lumped system analysis — Semi Infinite and Infinite Solids —Use of Heisler's charts Experiment on Heat transfer through composite lagged pipe, Experiment on natural and forced convection heat transfer — from PIN-FIN Apparatus.

#### Unit-2 - Numerical Methods in Heat Transfer

15 Hour

Taylor series expansion, Finite difference equations (FDE) of 1st, and 2nd order derivatives, Truncation errors, order of accuracy, Application of FDM in Steady and unsteady one dimensional heat conduction equation Practice on one dimensional steady and unsteady state heat conduction in finned systems.

#### Unit-3 - Convection and Heat Exchangers

15 Hour

Free and Forced convection – Non dimensional numbers, Boundary layer concept, Free Convection – Flow over vertical plate, horizontal plate, cylinders and spheres, Forced convection- Internal flow, External flow Flow over flat plates, Heat Exchanger Types - Overall Heat Transfer Coefficient – Fouling Factors. LMTD and NTU methods Experiment on natural convection heat transfer - vertical tube, Experiment on forced convection heat transfer - horizontal tube, Experiment on Parallel and Counter flow Heat Exchanger and shell and tube heat exchanger, Experiment on performance test on vapour compression refrigeration test rig and air conditioning test rig

Unit-4 - Radiation 15 Hour

Radiation laws, Black and Gray body Radiation, Shape Factor. Electrical Analogy. Radiation Shields, Gas radiation Experiment on radiation using emissivity apparatus and Stefan Boltzmann apparatus

Unit-5 - Phase Change Heat and Mass Transfer

15 Hour

Nusselt's theory of condensation- Regimes of Pool boiling and Flow boiling, correlations in boiling and condensation., Fick's law of diffusion, Steady state diffusion through plane membrane, Equimolar counter diffusion, Isothermal evaporation of water vapour into air, Convective mass transfer. Experiment on dropwise and filmwise condensation

#### Unit-1 - Solution of Ordinary Differential Equations

15 Hour

Overview of Engineering systems: Continuous and discrete systems – Solution of governing equations by Variational principles and weighted residual techniques for one-dimensional differential equations. Finite element formulations by Rayleigh-Ritz and Galerkin's methods. Spring element-stiffness matrix, assembly procedure of global stiffness matrix, load vector- solution methods for linear algebraic equations. Gauss elimination method.

Practice:

Solution of differential equations by variational and weighted residual methods

Solution of differential equations by finite element method

#### Unit-2 - One Dimensional Structural Analysis

15 Hour

Development of bar element-Governing equation - Minimum potential energy concept-higher order bar elements- application to trusses- Beam elements- natural coordinates- formulation of element stiffness matrix and load vectors

Practice:

Solution of bar/truss/beam problems

Derivation of stiffness matrix and load vectors for higher order elements

#### Unit-3 - Finite Element Analysis of Two Dimensional Problems

15 Hour

Theory of two dimension elasticity-plane stress and strain conditions- derivation of shape function and element matrices of constant strain and linear strain triangle elements-Four node quadrilateral elements-isoparametric formulation-Lagrange and serendipity family elements-Higher order elements-Gauss quadrature for numerical integration-axi-symmetric problems

Practice: 1.Static analysis of plate with plane stress/strain conditions using triangular and quadrilateral elements

Unit-4 - Structural Dynamics 15 Hour

Hamilton's Principle- lumped and consistent mass matrices for bar, beam and triangular elements-formulation of Eigen value problems in solid mechanics-natural frequency and normal modes for axial vibration of bar and transverse vibrations of beams-forced vibration response-Numerical time integration (Finite Difference Method, Runge-Kutta method)

Practice:

Determination of natural frequencies and mode shape of axial vibration of bar

Determination of natural frequencies and mode shape of transverse vibration of beams

#### Unit-5 - Heat and Fluid Flow Problems

15 Hour

Basics of Heat transfer-Governing equations and boundary conditions-Derivation of conductivity, convection and capacitance matrices and thermal load vectors for one dimensional element- steady state and transient heat conduction in one dimension-One dimensional potential fluid flow problems- Introduction to finite element software packages

Practice:

steady state heat transfer problem

transient heat transfer problem

Demo on Finite Element software with advanced modules such as solidification, machining, forming, additive manufacturing processes

#### Unit-1 - IoT in Industrial Revolution

Introduction to Industry 4.0 - Digitalization and the networked economy - Basics of Internet of Things (IOT) and Network protocol - IOT Architecture and its standards - Industry Internet of Things (IIOT) - Need of sustainability assessment of Industries - Lean Production and Smart factory - Introduction to sensors and actuators - Next generation sensors.

#### Unit-2 - Bigdata and Cyber Security In Industry 4.0

9 Hour

9 Hour

Cyber Physical Systems (CPS) – Features - Role of Al in Industry 4.0 - Need of Big Data in IIOT - Big Data analytics – Data Science in IIOT and Data centred network - Data management using Hadoop - Cyber security in Industry 4.0 - Components - Threats and Awareness - Security issues within Industry 4.0 network.

#### Unit-3 - Cloud Computing for IoT

9 Hour

Introduction to Cloud computing - Cloud computing service options - Cloud deployment models - Cloud virtualization - Types of Hypervisors - Fog computing architecture in IIOT - Cloud 9marketplace and Cloud providers - IOT Gateway, IOT Edge, and its programming

#### Unit-4 - Digital Manufacturing

9 Hour

Introduction to Digital manufacturing - Architecture of Digital manufacturing - Digital Twin technology for smart manufacturing system - Road map to success in Digital Manufacturing - Identification of current situation in Industry – Perform Self-study – attain future goal with in Digital Manufacturing and Design (DMD).model – Intelligent Machining - concept, elements and benefits.

#### Unit-5 - Applications and Case Studies

Application: Assembly sectors in Factories, Inventory and Quality control in Industries, Industrial security and Safety Management and Health care sectors. Case Study: Processing and packing industries and Automobile manufacturing sectors.

Unit-1 - Introduction to CAD 9 Hour

Fundamentals of Computer-aided design, Product Life Cycle, Sequential and concurrent engineering, Coordinate Systems, 2D transformations, 3D transformations, Wireframe modeling, Surface modeling, Solid modeling - Constructive Solid Geometry and Boundary Representation, Feature Entities and Parametric Modeling

#### Unit-2 - Representation of Curves and Surfaces

9 Hour

Mathematical representation of lines, circles, parabolas, ellipses, Hermite curves, Bezier curves, and B-spline curves. Parametric representation of the plane surface, Ruled surface, Surface of revolution, and Tabulated cylinder

#### Unit-3- Graphic Concepts, Standards, and Rapid Prototyping

9 Hour

Hidden line removal - Visibility Techniques, Priority and Area -oriented Algorithm, Hidden surface removal algorithms, Hidden Solid removal algorithms. Cohen Sutherland Clipping Algorithm, Shading & Coloring and its types, Introduction to Data exchange standards and its types. Feature technology, Feature data models, Feature recognition, Design by feature. Integration of CAD/CAM – Reverse Engineering – Rapid Prototyping

#### Unit-4 - CNC Machines, Group Technology, and FMS

9 Hour

Fundamentals of CNC machines, Classification, Deve<mark>lopments, CN</mark>C principles of operation and features, Machining Centers and their types, Simple CNC Part Programming of Turning and Milling Operations - Tutorials. Introduction of CAM package. Introduction to Group technology and its types, Part families, coding and classification, Production flow analysis with the case study, Machine cell design with the numerical case study. Introduction to FMS, types, applications, and benefits, FMS: components, Layout Configurations and implementation

#### Unit-5 - Production Planning and Control System

9 Hour

Computer Aided Assembly Planning, Computer Aided Process Planning (CAPP), Computer Aided Inspection, Materials Requirement Planning & Management Resource planning with the case study, Capacity Planning and Data collection systems, Shop floor control and monitoring systems, Inventory control and Case study JIT approach and Case study, Lean Manufacturing, Agile manufacturing, Introduction to virtual and distributed manufacturing

## Unit-1 - Overview of Composites

Introduction to composites – Definitions, Classification, Constituent materials for composite materials, Matrix materials – types and properties Reinforced materials—types and properties Fibers for advanced composites, Metal matrix, Polymer matrix, Ceramic matrix, Hybrid composites, Sandwich structures, Functionally graded materials, Characteristics of composite materials Mechanical behaviour of composite materials, Current and potential advantages of fibre-reinforced composite materials, Applications of composite materials, Classification, Constituent materials for composites, Matrix materials — types and properties Reinforced materials—types and prop

## Unit-2 - Design of Composites 9 Hour

Rule of mixture — Voigt model — Reuss model — Upper & Lower bound moduli — Simple problems, Introduction to solid mechanics - lamina and laminates, Interlamellar stresses — Unidirectional and angle lamina and laminates, Engineering constants of lamina and laminates, Effective modulus in stress-strain relationship, Symmetry in stress-strain relationship, Orthotropic and isotropic engineering constants, Effective moduli of continuous fibre reinforced lamina with simple problems, Failure predictions in lamina and laminates.

# Unit-3 - Composite Manufacturing 9 Hour

Glass fibre production, Carbon fibre production, Polymer matrix composites – Process parameters -Temperature-Pressure-Cure cycles, Hand lay-up, Bag Moulding, Compression moulding, Filament winding, Pultrusion, Resin transfer moulding, Tube rolling, Additive manufacturing of PMCs, Metal matrix composites – Stir casting, Infiltration, Diffusion bonding, Powder metallurgy, Spray forming, Chemical vapour deposition, In-situ composites, Ceramic matrix composites - Solid state route, Sol-gel route.

#### Unit-4 - Nano-, Bio- and Green Composites

9 Hour

9 Hour

Definition of nanocomposites, Classification based on topology, Constituents of nanocomposites, Core-Shell nanocomposites, Ceramic/Metal nanocomposite Systems, Nanocomposites based on polymer matrix, Carbon-carbon, Carbon-metal nanocomposites, Application of nanocomposites in Coating, Electrical & Electronics, Fuel cell, Food packaging, Energy storage, Solar cells. Definition of bio-composites — Biocompatibility, Applications as bioimplants, Green composites — Eco-friendly and Sustainability, Recyclable/Bio-degradable polymer matrix, Natural fiber reinforced composites; Plant fibres — Types, Properties, Advantages and Disadvantages of green composites.

#### Unit-5 - Characterization of Composites

9 Hour

Quality Inspection method, Defects detection, Fibre test, Neat resin matrix test, Tensile test, Compression test, In-plane shear test, Interlaminar shear test, Flexural test, Interlaminar fracture, Fibre/Matrix interface tests, Fatigue and impact tests, Environmental effects, Biodegradability, Fracture behaviour and damage tolerance, Fractographic analyses, Thermal, magnetic and electrical properties characterization, Water absorption tests, Flammability tests.

Unit-1 - Introduction to Automation 9 Hour

Automation in Production Systems- Computerized Manufacturing Support Systems, Automation Principles and Strategies, Basic elements of an Automated Systems, Advanced automation functions, Level - Process Industries and Discrete Manufacturing Industries, Importance of automated system, working principle and examples - Fabrication or selection of various components of an automated system, Sensors used in an automated system, construction and principle of operation.

#### Unit-2 - Automated Manufacturing and Monitoring System

9 Hour

Introduction to Manufacturing Systems - Components - Classification - Single Station Manufacturing Cells - Cellular Manufacturing - Manual assembly lines - Transfer Lines - Automated Assembly Systems - Production Monitoring System-Introduction - types - process control & strategies - Linear & Circular Interpolation Program Simulation & Execution- Milling in Sinumeric Controller - Inspection - types - Automated Inspection - Quantitative Analysis of Inspection - case-studies.

#### Unit-3 - Flexible Manufacturing System

9 Hour

Introduction to FMS, Objective, need, Components and types of FMS, Applications, Benefits and limitations, planning and implementation issues, Quantitative Analysis of Flexible Manufacturing Systems, Simple example of FMS planning for Automobile plant, Different FMS software's, General structure and Requirements for FMS Software, Functional descriptions and operational overview advantages, FMS application in machining, sheet metal fabrication

#### Unit-4 - Industrial Robotics and Material Handling System

9 Hour

Introduction, Robot Anatomy and Related Attributes, Robot Control Systems, End Effectors, Sensors in Robotics, Industrial Robot Applications, Robot Programming overview, Engineering Analysis of Industrial Robots. Automated Storage Systems – types - Automated Storage Systems – types - Automated Storage/Retrieval Systems (AS/RS), Material transport system – types - Automated guided vehicles (AGVs), Automatic Identification Methods - Barcode Technology, Radio Frequency Identification (RFID), Magnetic Stripes, Optical character recognition (OCR) - case-studies.

#### Unit-5 - Intelligent Manufacturing Systems

9 Hour

Artificial Intelligence based systems, role of artificial intelligence in Industry Automation, Benefits, Applications, Evolution of process automation, Robotic Process Automation (RPA) - Challenges, benefits of RPA - RPA in supply chain, Industry 4.0 – building blocks - IoT in Manufacturing - Smart Manufacturing - Concepts, applications, benefits & challenges, Product Lifecycle Management (PLM), Case studies.

#### Unit-1 - Energy and Environment

9 Hour

Introduction to Energy and Environment, Global and national energy scenario, World energy reserves, Effect of Greenhouse gases, Global warming, Renewable and non-renewable energy sources, Environmental aspects and utilization, Energy prices, World energy polices, United Nations framework convention on climate change (UNFCC), Kyoto Protocol, conference of parties (COP), clean development mechanism (CDM), prototype carbon funds, carbon credits and trading, benefits to developing countries, Sustainable development goals, MNRE, Funding schemes and policies.

#### Unit-2 - Energy and Environment

9 Hour

Introduction, Energy conservation schem<mark>es, Energy</mark> Conservation Act 2001, Industrial energy conservation methods, Energy surveying for industries., Energy index and cost, Energy conservation in engineering and process industries, Energy conservation in Buildings, Concept of Green building

#### Unit-3 - Energy Savings in Thermal Systems

9 Hour

Fuels and consumption, Energy savings in Boiler, Fuel economy measures in furnaces, Waste heat recovery systems, Cogeneration Systems, Energy saving in HVAC, Refrigeration, Insulated pipes and Energy Storage systems

#### Unit-4 - Energy Management and Auditing

9 Hour

Energy management principles, Energy resource management, Elements of Monitoring and Targeting System, Energy management information system, Energy measurement in energy management, Energy Audit-Types, Methodology, Benchmarking and Energy Performance, Energy instrumentation, Matching energy usage to requirement, Maximizing system efficiency. Fuel and energy substitution, Demand side management, Simple case study of energy auditing in process industries

#### Unit-5 - Energy Economics

9 Hour

Costing techniques in energy engineering, Cost factors, Break even analysis, Investment - appraisal and criteria, Financial analysis-Simple payback, Return on investment, Net present value, Internal rate of return, Cash flows, Risk and sensitivity analysis; Financing options, Energy performance contracts and role of energy service companies. Advances and recent trends in solar PV

#### Unit-1 - Fundamentals of Solar Radiation and its Measurements

9 Hour

The sun and the earth, electromagnetic spectrum- Laws of thermal radiation- Solar radiation: beam and diffuse radiations- Sun and earth geometry- Solar angles- Sunrise, sunset and day length- Solar radiation on tilted surfaces - Measurement of solar radiation: pyranometer, pyrheliometer, sunshine recorder, Along with practical case studies of solar radiation measurement using pyranometer- Analysis of the solar radiation data

Unit-2 - Solar Collectors 9 Hour

Classification of solar collectors - flat plate, evacuated tube – Relative merits and demerits - Solar concentrators - receiver geometries, concentration ratio, Compound parabolic concentrators - parabolic concentrators: trough systems, dish systems- Solar central receiver system- Compound parabolic concentrators, Fresnel lens concentrator- Real time case studies in Parabolic Concentrator cooking plant

## Unit-3 - Design of Solar Thermal Systems

9 Hour

Design of solar flat plate collector, solar active systems using f- chart method, solar cooker, air heater, and dryer- Solar desalination - types, and operation - Solar Pond- types and applications, Solar thermal power plants, solar furnace - Review of parabolic concentrator receivers - design

#### Unit-4 - Solar Thermal Energy Storage and Solar Cooling

9 Houi

Need for solar thermal energy storage - Sensible and latent heat storage, advantages, and disadvantages - Stratified thermal energy storage - PCM based solar thermal energy storage - Selection of latent heat storage materials - Solar cooling systems and its advantages, solar assisted - vapour compression refrigeration - vapour absorption cooling systems, thermoelectric cooling systems- Ministry of New and Renewable Energy (MNRE), National renewable energy laboratory (NREL) annual reports on recent advancement techniques and funding details

#### Unit-5 - Solar Photovoltaic Energy Conversion

9 Hour

Photovoltaic effect, advantages and disadvantages of solar photovoltaic technology and classification, Semiconductors, p-n junction, photo generation of charge carriers - I-V characteristics of solar cell - Losses in solar cells and solar module - Maximum power point tracking in solar photovoltaic system - Photovoltaic modules in series and parallel - Concentrated photovoltaic cells, multi junction solar cells, Temperature dependent performance parameters - Grid connected and standalone photovoltaic system- Case studies from PV power plant

#### Unit-1 - Fundamentals of Product Development

9 Hour

Types of various trends affecting product decision - Social Trends (Demographic, Behavioral, Psychographic), Technical Trends (Technology, Applications, Tools, Methods), Economical Trends (Market, Economy, GDP, Income Levels, Spending Pattern, target cost, TCO), Environmental Trends (Environmental Regulations and Compliance), Political/Policy Trends (Regulations, Political Scenario, IP Trends and Company Policies); PESTLE Analysis. Overview of Products and Services (Consumer product, Industrial product, Specialty products etc); Types of Product Development (NPD/ Re-Engineering (Enhancements, Cost Improvements)/ Reverse Engineering/ Design Porting & Homologation); Overview of Product Development methodologies (Over the Wall/ Waterfall/ V-Model/ Stage-Gate Process/ Spiral/Systems Engineering/ Agile); Product Life Cycle (S- Curve, Reverse Bathtub Curve); Product Development Planning and Management (Budgeting, Risk, Resources and Design Collaboration, Scheduling, Change Management, Product Cost Management

#### Unit-2 - Requirements and System Design

э пои

Types of Requirements (Functional, Performance, Physical, Regulatory, Economical, Behavioral, Technical, Stakeholder, Environmental, Industry specific, Internal-Company Specific); Requirement Engineering (Gathering (VOC), Analysis (QFD), Design Specification); Traceability Matrix and Analysis; Requirement Management .System Design & Modeling: Introduction to System Modeling; System Optimization; System Specification; Sub-System Design; Interface Design.

#### Unit-3 - Design and Testing

9 Hour

Industrial Design and User Interface Design; Introduction to Concept generation Techniques; Concept Screening & Evaluation - Concept Design, S/W Architecture, Hardware Schematics and simulation. Component Design and Verification; High Level Design/Low Level Design of S/W Programs, S/W Testing; Hardware Schematic, Component design, Layout and Hardware Testing. Prototyping: Types of Prototypes (Mockups, Engineering Assessment Prototype, Alpha, Beta, Gama); Introduction to Rapid Prototyping and Rapid Manufacturing

#### Unit-4 - System Integration, Testing, Certification and Documentation

9 Hour

Manufacturing/Purchase and Assembly of Systems; Integration of Mechanical, Embedded and S/W systems; Introduction to Product verification processes and stages – Industry specific (DFMEA, FEA, CFD); Introduction to Product validation processes and stages - Industry specific (Sub-system Testing/ Integration Testing/ Functional Testing/ Performance Testing / Compliance Testing); Product Testing standards and Certification – Industry specific; Product Documentation (Compliance Documentation, Catalogue, Brochures, user manual, maintenance Manual, Spares Parts List, Warranty, Disposal Guide, IETMS, Web Tools).

#### Unit-5 - Sustenance Engineering, End-of-Life (EoL) Support and Business Dynamics

9 Hou

Maintenance and Repair; Enhancements. Product EoL: Obsolescence Management; Configuration Management; EoL Disposal Engineering Services Industry – overview; Product development in Industry versus Academia. The IPD Essentials: Introduction to vertical specific product development processes; Product development Trade-offs; Intellectual Property Rights and Confidentiality; Security and configuration management

Unit-1 - Single DOF Systems 9 Hour

Free Vibration: Equation of motion for free undamped and damped vibration - Logarithmic decrement. Forced vibration of system subject to harmonic force - unbalance due to rotating and reciprocating mass - Base excitation - Vibration isolation and transmissibility; Whirling of shaft:

#### Unit-2 - Two and Multiple DOF Systems

9 Hour Equation of motion for free undamped systems-Newton's method- Lagrangian energy method- Coordinate coupling-natural frequencies and normal modes-tuned vibration absorber-Torsional vibration for single rotor, two rotor and three rotor systems, Geared systems

Unit-3 – Multiple DOF System 9 Hour

Influence coefficients-Stiffness and flexibility influence coefficients-formulation of Eigenvalue problem, natural frequencies and normal modes- orthogonal Properties of Eigen vectors - Dunkerlay's method - Rayleigh's Method - Holzer's method for coupled and uncoupled systems -Matrix iteration method-Forced vibration response using Finite Difference method and Runge-Kutta method

#### **Unit-4 - Continuous Systems**

Longitudinal vibration in rod - Transverse vibration in string- Torsional vibration in shaft-Lateral vibration in Beams-Vibrations in membrane

#### Unit-5 - Vibration Measurement

Transducers- Vibration pick-ups; Piezo-electric sensors, Frequency Measurement-Vibration Exciters-Experimental modal analysis; Condition monitoring Techniques-spectrum analysis; Single plane and two plane Balancing of machines

9 Hour

Unit-1 - Surfaces and Friction 9 Hour

Introduction to the concept of tribology, Nature of engineering surfaces, Surface topography: Surface profilometer, measurement of surface topography; importance of roughness parameters, Friction and its Laws, Types of friction, Sources of sliding and rolling friction, Friction characteristics of metals and non-metals, Friction due to ploughing, Friction due to adhesion, stick-slip motion, contact between surfaces, Hertzian contact theory, Junction growth theory, Relationship between adhesion, friction and interfacial fracture, Surface tension, surface energy, capillary effect

Unit-2 - Wear 9 Hour

Introduction and background of Wear, Types of Wear: Adhesive wear, Abrasive wear, surface fatigue, corrosive wear, erosive wear and fretting wear, wear on polymer, metal and ceramic, measurement of wear, methods to reduce the wear

Unit-3 - Lubricants and Lubrication 9 Hour

Lubricants and its types, Lubricant properties, Int<mark>roduction to</mark> Viscosity and its importance in lubrication, Stribeck curve and its significance, Lubrication Regimes and its application, Importance of film thickness and lambda ratio, Reynold equation, Bio-lubricant: Development and applications, Nano-lubricant: Development and applications

Unit-4 - Surface Engineering

9 Hour

Introduction of surface engineering, methods of surface engineering, Surface engineering through removal of materials: grinding, buffing, lapping, etching, surface texturing, Surface engineering through material addition: Hardening, Electrodeposition, Surface engineering through energy beams: Laser cladding, Ion beam, Surface engineering through spray techniques: Thermal and plasma spray, cold spray, HVOF, HVAF, Application of surface engineering in industrial systems

Unit-5 - Surface Coating

9 Hour

Introduction of surface coating, Methods of thin film coating: PVD, CVD, Electroplating, Spin coater, spray coating, Surface Coating by Wetting, diffusion coating, measurement of coating thickness, characterizations of surface coatings, Applications of surface coating in industrial systems

Unit-1 - DFMA: Introduction 9 Hour

Introduction to DFMA: History of DFMA, Steps for applying DFMA during product design, Advantages of applying DFMA during product design, Reasons for not implementing DFMA, Significance of design, Systematic working plan, The engineering problem to be solved, The basic design, Factors influencing choice of materials, The factors influencing manufacturing, Process Capability, Tolerances relevant to manufacturing, Assembly- Material condition, Tolerance stack- effects on assembly- Examples. Methods of eliminating tolerance stack- Examples

#### Unit-2 - Design for Manufacturing Process

9 Hour

Influence of loading, Materials, Production methods on form design, Casting Considerations- Requirements and rules for casting, Form design of pressure die castings, Redesign of components for casting, Design for cleaning, Design for polishing and plating, Design for plated surface, Thermal sprayed coating., Welding Considerations-Welding Processes, Requirements and rules for welding, Redesign of components for welding, Metal Extrusion, Metal stamping, Fine blanked parts, Rolled formed sections.

#### Unit-3 - Form Design for Forging and Machining

9 Hour

Forging Considerations, Hammer forging, Drop forging, Requirements and rules for forging, Redesign of components for forging, Choice between casting, forging and welding. Machining Considerations, Requirements and rules for Machining Considerations-Reduction of machined areas, Redesign of components for Machining, Simplification by separation-Simplification by Amalgamation, Case studies-forging and Machining

#### Unit-4 - Design for Assembly Processes

9 Hour

DFA Introduction, Distinction between assembly methods and processes, Factors Determining assembly methods and processes, Product Design factors independent of methods and processes, Design factors dependent on Assembly methods, Design factors dependent on Assembly processes, Factors Influencing Production rate to Facility Ratio, Gripping.

#### Unit-5 - Design for Assembly Methods

9 Hour

Approaches to design for assembly Introduction, Approaches based on design principles and rules, Example DFA method using Design Principles, DFA Systems employing Quantitative evaluation procedures, IPA Stuttgart Method, DFA Methods employing a Knowledge based approach, Boothroyd and Dewhurst DFA method Objectives of the method, Software design for assembly

CO-1:	define the concept of top	ology and vehicle integration	2	:	-		-	-	2	-	-	-	-	-	2	-	-
CO-2:	analyze the performanc <mark>e</mark>	characteristics of Electric vehicle	2	1	- 1	1	-		2	-		-	-	-	3		- ]
CO-3:	apply the Energy requir <mark>er</mark>	nent based on GVW and to identify the Battery Sizing	2	RV-Y	4	25	-		2	-	-	-	-	-	3		-
CO-4:	apply EV regulations, star	ndards and testing	2		1	1.5	-		2	3		-	-	-	3		-
CO-5:	incorporate homologation	requirements	2			. 7	-		2	3	1	-	-	-	2		-

Unit-1 - Introduction 9 Hour

History and development of electric Vehicles- Need of EV-types of EV - Components of an EV, chassis design considerations of a conventional vehicle and electric vehicle, EV Power train - Components, Steering systems, Regenerative braking and Suspension systems

#### Unit-2 - Vehicle Mechanics

9 Hour

Basic terminology in vehicle dynamics-Rolling resistance, tractive effort, aerodynamic drag, hill climbing force, Vehicle Acceleration – Performance parameters, power requirement-Force -velocity characteristics, wheel balancing, wheel alignment

#### Unit-3 - Energy Sources

9 Hour

Batteries-principle-construction-working, Battery Characteristics, Open Circuit Voltage (OCV), Battery efficiency, Battery Rating Energy requirement based on gross vehicle weight (GVW) rating, Investigation on Pros and Cons of Lead-Acid, Lithium-Ion, Nickel Metal Hydride (NiMH) batteries for E-mobility, Fuel cells – Construction and working, Solar cells, Fundamentals and controls of Battery Management System (BMS) 9 Hour

# Unit-4 - Regulations, Standards and Testing

Introduction of Regulatory framework from policy decisions, understanding of testing agencies and test facilities in India, Scheme for Faster Adoption and manufacturing of electric and hybrid vehicles (FAME), IS Standards, ARAI standards, ISO / IEC Standards for Motors design, Testing, Bharat DC-001 or Bharat AC-001 standards

#### Unit-5 - Homologation

9 Hour

Fundamentals, FAME requirements, Power, Torque, Gradient & Energy consumptions, Comprehensive Vehicle homologation protocols, Retro fitment EV Homologation procedures, Standards and testing related to EV Homologation as per AIS 131, Introduction to EMI/EMC Testing as per AIS 004, ISO26262 of power electronics, Case studies

Unit-1 - Introduction 9 Hour

Biomechanics: definition and perspective- kinetics and kinematics- Quantitative and qualitative problems- Structure and movements of human body

#### Unit-2 - Anatomical Standards and Plane Reference

9 Hour

Anatomical terms and terminology, reference position and reference planes and axes. Joint Torques - Levers - Bone behavior under various loads- the properties of Maxwell& Voight Models of bone -Location of Center of Gravity of human body- Gait analysis. Properties of Bone,

#### Unit-3 - Musculoskeletal Tissue Mechanism

9 Hour

Musculoskeletal Soft Tissue Mechanics- Structure of Soft Tissue Cartilage, Tendon and Ligament, Muscle. Mechanical properties of tendons and ligaments- muscles- study of stress and strain, stress - strain curve for tendons and ligaments- Joint Architecture- Synovial joint and loads in joints- Behavioral properties of the Musculotendinous unit - Factors affecting muscular - Force generation- Mechanical characteristics of muscle force -velocity-length and time relationships

#### Unit-4 - Mechanical Testing of Body Components

9 Hour

Experimental testing in Biomechanics - testing instru<mark>ments- chall</mark>enges in testing, repeatability, reproducibility, reliability of results - Pit falls of biomechanical testing- Computational methods in biomechanics- Loading and results in computational studies - Measuring Tools for body angles, kinematic quantities video and film- Other movement-monitoring systems- Stride and Temporal Parameters, Motion Measurement, Ground Reaction Measurement Dynamic Electromyography (EMG)

#### Unit-5 - Ergonomics Design

9 Hour

Biomechanics in Ergonomics design with case studies on design of ladder - stair climbing and walking on ramps- Orthotics and prosthetics devices- introduction of Dental Biomechanics and Sports Biomechanics

#### Unit-1 - Linear Programming Model

9 Hour

Necessity of OR in industry – Concept and formulation of LP models for the real life and industrial problems – Graphical method – Simplex method – Big M method. Solving tutorial problems using software.

#### Unit-2 - Transportation and Assignment Models

9 Hour

Transportation model – basic feasible solution using Least Cost, VAM – Optimality test using U-V method-Assignment model – Minimization and Maximization problems Solving tutorial problems using software.

# Unit-3 - Sequencing and Replacement Models

9 Hour

Sequencing model – Processing of 'n' jobs on 2 & 3 machines. Replacement models – items that deteriorate with time – items that fail completely – individual and group replacement policy. Solving tutorial problems using software.

#### Unit-4 - Queuing and Inventory Models

9 Hour

Queuing theory - Poisson arrival and exponential service times - single server with limited, unlimited number of arrivals allowed. Inventory models - Purchase and Manufacturing deterministic models without shortages allowed Solving tutorial problems using software.

#### Unit-5 - Project Network Model and Game Theory

9 Hour

PERT & CPM techniques – Project completion time – CPM cost model. Game theory- 2 persons zero sum games. Pure and mixed strategies. Method of dominance – Matrix oddment method for n x n matrix - Solving tutorial problems using software.

#### Unit-1 - Introduction to Soft Computing

9 Hour

Evolution of Computing: Soft Computing Constituents, Conventional AI to Computational Intelligence- Various Soft Computing Techniques and Their Description-Machine Learning Basics, Confusion Matrix, precision, recall and F1 score- Understanding AUC - ROC Curve-Solving simple application problems. Single and Multi-objective optimization techniques

#### Unit-2 - Fuzzy Logic Applications

9 Hour

Introduction to Fuzzy logic, Fuzzy sets, Membership functions, Fuzzy rules, Fuzzy logic architecture- Applications of Fuzzy logic in Machining, Robotics and Composites - Adaptive Neuro-Fuzzy Inference Systems (ANFIS) with applications. Classification and Regression Trees--Evolutionary computation- Case studies related to Mechanical Applications

#### Unit-3 - Genetic Algorithm Applications

9 Hour

Introduction, Population, Fitness function, Crossover, Mutation, Reproduction-Solving single-objective optimization problems using GAs- Heuristic Algorithms-Simulated annealing, A\* Search and Best First search-Weighted Principal Component Analysis-Applications of GA in Machine Learning-Particle swarm optimization (PSO) Algorithm- Case studies

#### Unit-4 - ANN and its Applications

9 Hour

Motivation and properties of Biological Neural Networks, Feed Forward Neural Networks, Recurrent Neural Networks-Perceptron's classification. Activation Functions- Back Propagation Networks-Image classification using CNN, YOLO Algorithm, Pooling layer and Feature extraction- Artificial Neural Networks in CFD-Applications of CNN in Robot vision-Case studies

#### Unit-5 - Software Based Computational Analysis

9 Hour

Using software programming-Practice on Linear Regression Single and Multiple Variables and Polynomial Regression. Practice on Gradient Descent Algorithm and Logistic Regression. Computational analysis on K Means Clustering, Support Vector Machine, Naive Bayes Classifier and Random Forest Decision Tree Algorithm.

CO-5:	estimate machining time of	of various metal removal operations	. * · <u>J</u>	-3		7	-	- 5		-	12	-	-	-	-	3 -

Unit-1 - Process Planning 9 Hour

Process Planning-Steps involved, Bill of Materials, Uses, Routing, Route Sheet, Process Selection, Process Planning Activities, Machine Selection, Factors Influencing Process and Material Selection Parameters, Documents Required for Process Planning, Steps in Process Planning, Computer Aided Process Planning (CAPP) - Benefits, Approaches -Variant, Generative Method-Practices, and Breakeven Analysis. Case Study in Process Planning

Unit-2 - Costing and Estimation 9 Hour

Cost Estimation, Cost Accounting, Objectives of Cost Estimation, and Components of a Cost Estimate, Cost Estimation Procedure, Classification of Costing, Elements of Cost, Ladder of Costs, allowances in Estimation.

Unit-3 - Elements of Cost 9 Hour

Introduction-Material cost, Labour cost, and Expenses. Determination of direct and indirect cost, material, Labour Analysis of overhead expenses-Factory expenses - Administrative expenses-selling and distributing expenses. Depreciation-Causes of depreciation- Methods of depreciation, simple problems

### Unit-4- Cost Estimation in Forming, Casting, and Welding Shop

9 Hour

Introduction of hand forging shop, Losses in forging, estimation of forging cost, foundry shop, moulding section, core making section, fettling section, casting section. Estimation of casting. Introduction of arc, gas welding, estimation of arc welding, gas welding.

# Unit-5 - Estimation of Machining Time and Cost Estimation of machining time and cost of Lathe operations, Drilling, Milling Shaping operations, Grinding operations.

9 Hour

#### Unit-1 - Introduction to Mechatronics System Design

9 Hour

Introduction to Mechatronics- Integrat<mark>ed Design</mark> Issues, Design Process, Important Features. Mechatronics Key Elements: Information Systems- Mechanical Systems - Electrical Systems - Sensors and Actuators, Real-Time Interfacing. Applications in Mechatronics: Condition Monitoring- On- line and Model-Based monitoring, Opto mechatronics, E-Manufacturing, Mechatronic Systems in industrial automation.

#### Unit-2 - Modeling and Simulation of Physical Systems

9 Hour

Component modeling: Operator Notation and Transfer Functions, Block Diagrams, Manipulations, and Simulation, Block Diagram Modeling: Direct Method, Transfer Function/ Mechanical Illustration Conversion to Block Diagram Models. Analogy Approach model -Impedance Diagrams, Modified Analogy Approach. Modeling of Physical Systems: Electrical, Mechanical – Translational and rotational Systems

#### Unit-3 - Sensors Used in Mechatronics Systems

9 Hour

Introduction to Sensors and Transducers, Sensor Classification, Elements of Measurement system, Quality Parameters. Sensors for Motion and Position Measurement: Resistance Transducers, Inductive and Capacitance Transducers. Digital Encoders: Principle, Absolute and Incremental Encoders. Resistive Transducers, Strain Gauges, Tactile Sensors. Vibration and Acceleration Sensors: Piezoelectric Transducers, Active Vibration Control, Magnetostrictive Transducer. Sensors for Flow Measurement: Solid Flow, Liquid Flow, Differential Pressure, Ultrasonic Flow Transducers, Hot Wire anemometers, Electromagnetic Flow Meters. Temperature Sensing Devices: Thermistors, Thermocouple, Radiative Temperature Sensing, Temperature Sensing using Fiber Optics.

#### Unit-4 - Actuators Used in Mechatronics Systems

9 Hour

Electrical Motors: DC Motors, AC Motors, Stepper Motors: Permanent Magnet Stepper Motor, Modeling Approach, Drive Equations/ Motor Equations and Block Diagram Model, Position System Using Stepper Motor. Piezoelectric Actuators. Control Systems in Fluid Power, Fluid Power Actuators, Fluid Power Design Elements, Fluid Power Energy-Input Devices, Energy Modulation Devices (Valves), Energy-Output Devices, Control Modes of Fluid Power Circuits. Electrical Components in Fluid Power Circuits.

#### Unit-5 - Signals, Systems, and Controls, Application Case Studies

9 Hour

Introduction to Signals, Systems, and Controls. System Representation: Transfer Function Form, Basic Feedback System and G-Equivalent Form. Measures of System Performance: Stability, Accuracy, Transient Response, and Sensitivity. Application Case Studies: Car park barriers, Pick and place robot, Electronic washing machine, Position Control of a Permanent Magnet DC Gear Motor, Auto-Control System for Greenhouse Temperature, Transducer Calibration System for Automotive applications, Strain Gauge Weighing System.

### Unit-1 - Introduction to Industrial Robot

9 Hour

Introduction to Robotics, Developments in Robotics- Definition and law of robotics, Robot anatomy -Terminology of Robotics, Accuracy and repeatability, dexterity-RCC compliance - Robot Drive Systems-Hydraulic, Pneumatic and Electric system. Mechanical grippers-Slider crank mechanism, Screw type-Rotary actuators, cam type-Magnetic grippers- Vacuum grippers, Robot Sensor, Operator interface, Safety monitoring devices in Robot.

### Unit-2 - Robot Motion Analysis

9 Hour

Robot kinematics-Types- 2D, 3D Transformation-inverse kinematics- Simple Problems-Scaling, Rotation, Translation, Homogeneous Transformations, multiple transformations – Simple Problems-Kinematic equations using Homogeneous Transformations – Joints, frame assignment to links and orientation- Simple Problems-Velocities and Static forces in manipulators: Jacobians and singularities, Robot work cell design and its types, Hands on session with Industrial robot.

# Unit-3 - Smart Material and Fabrication

9 Hour

Robot -Bio Inspiration and its Types - Role of Sma<mark>rt material- Cl</mark>assification of compliant Material -Shape Memory alloys- Elastomers -Dielectric Elastomers -Fluid Materials -Liquid Metal Embedded Elastomers-Hydrogels- Magnetic Hybrid Material, Fabrication Methods-casting, molding,3D printing.

### Unit-4 - Soft Sensing and Grippers

9 Hour

Self-sensing- Physical Principles -Coulomb effect, Johnsen Raheb Effect, Electro adhesion Force, Dielectric Polarization, Highly Sensitive Soft Three axial force sensor, End effector – Types- Biological Gripping-Hooking Grippers- Lock and Key Gripper-Clamp Gripper -Sucker Gripper -Adhesion Gripper -Frictional Gripper - Electro Adhesive Grippers-Tendon Based Gripper.

# Unit-5 - Robot Applications

9 Hour

Various applications of Industrial Robot, Material transfer, Machine loading/unloading, Welding Robot, Soft robot Translational Applications-Self-Healing Soft Pneumatic Robot, Artificial Eyelids Closing using Exopatches, Soft Robotic Hand, Portable Continuum Robot, Dynamic analysis of Rotary soft robot arm Implementation of Artificial Intelligence.

Unit-1 - Introduction to HVAC 9 Hour

Brief history of air conditioning and impact of air conditioning-HVAC systems and classifications-heat pumps-modes of heat transfer-sensible and latent heat- refrigerant and brines- comfort air conditioning: thermodynamics of human body, metabolic rate, energy balance and models, thermoregulatory mechanism

# Unit-2 - Heat Transfer Through Building Structures and Load Calculations

9 Hour

Solar radiation-heat transfer through walls and roofs-empirical methods to calculate heat transfer through walls and roofs using decrement factor and time lag method. Infiltration, stack effect, wind effect-internal heat gains, system heat gain, cooling and heating load estimate.

# Unit-3 - Ventilation Systems

9 Hour

Introduction- fundamentals of good indoor air quality, need for building ventilation, types of ventilation system, air inlet system-Filters, heating & cooling equipment, fans, duct design, grills, diffusers for distribution of air in the workplace, HVAC interface with fire and gas detection systems - system requirements, devices and their functioning.

### Unit-4 - Air-Conditioning Systems

9 Hour

Classification of air-conditioning system - window, split, ductable split, ductable package, central plant chill water system - variable refrigerant volume (VRV) system - variable refrigerant flow (VRF) system - air distribution system- duct sizing methods, selection of diffusers and grilles - legends and symbols used in the HVAC industry - hydronic system- water piping, fittings, valves, and selection of pumps - district cooling system.

# Unit-5 - Applications of Comfort Air Conditioning Systems

9 Hour

Automobile air-conditioning systems - industrial air conditioning: textile industries, semi-conductor industries, pharmaceutics - air-conditioning systems integrated with energy storage technologies - adopting codes and standards for energy efficiency - designing for efficient operations and maintenance — commissioning - design of an air conditioning system for a laboratory- case study I - design of an air conditioning system for a laboratory- case study II.

Unit-1 - Spark Ignition Engines

Mixture requirements – Fuel injection systems – Single point, Multipoint & Direct injection - Stages of combustion – Normal and Abnormal combustion – Knock - Factors affecting knock – Combustion chambers. Heat release rate analysis- Alternative fuels- Alcohol, Hydrogen, Biogas-characteristics- engine modification

# Unit-2 - Compression-Ignition Engines

9 Hour

9 Hour

Diesel Fuel Injection Systems - Stages of combustion - Knocking - Factors affecting knock - Direct and Indirect injection systems - CRDI - Combustion chambers - Fuel Spray behavior - Spray structure and spray penetration - Heat release rate analysis- Alternative fuels- Biodiesel, Gaseous fuel, DME, DEE-characteristics- engine modification

#### Unit-3 - Pollutant Formation and Control

9 Hour

Pollutant – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke, and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps –EGR- Methods of measurement – Emission norms and Driving cycles-Onboard Diagnostics..

### Unit-4 - Recent Trends in IC Engines

9 Hour

Air assisted Combustion-Variable Geometry turbochargers- Variable valve timing - HCCI-PCCI-RCCI-Low-temperature combustion(LTC) -Dual Fuel Engines- NOx Adsorbers -

# Unit-5 - Hybrid Electrical Vehicles

9 Hour

Introduction To Electric and Hybrid Electric Vehicles- Types of EVs - Types of power train - Traction drive Power calculations for Electric Vehicles-Energy Storage Systems - Battery- Fuel Cell — Super capacitors - Power train design aspects for EV and HEV,

CO-5:	evaluate the concept of turbulence and Reynold's averaging and examine the turbulence modelling	9 -	3	-	-	2	À		-	Ĭ-	-	-	-	-	3 -	Ī

Unit-1 - Governing Equations 9 Hour

Introduction, Various applications of computational fluid dynamics, Models of fluid flow, Continuity equation derivation in all forms, Momentum, Energy and Scalar transport equations derivation, Conservation and Non conservation form of governing equations, Different types of boundary conditions —Dirichlet, Neumann, Cauchy and Robbins boundary conditions with examples, Classification and Mathematical behavior of Partial differential equations — elliptic, parabolic and hyperbolic equations, well posed problems

Unit-2 - Discretization Techniques 9 Hour

Discretization concept and principles, Finite difference approximations of partial derivatives – Forward, Backward and Central difference methods, Discretization of one dimensional un-steady state heat conduction, Explicit and Implicit method, Discretization of one dimensional wave equation, Tutorials on discretization of equations, Stability analysis of different equations, consistency and convergence, Discussion on CFL condition, Short discussion on shock capturing methods: Godunov, TVD, flux-limiter schemes

# Unit-3 - Solution Techniques and Numerical Methods for Compressible Flows

approaches

9 Hour

Direct methods for system of linear equations: Gauss elimination method and Tri-diagonal matrix algorithm, Iterative methods: Gauss-Siedel, Jacobi and relaxation techniques, Solution techniques for ordinary differential equations: Euler, predictor-corrector, Runge-Kutta methods, Linear multi-step methods: Adams-Bashforth method, Short discussion on algebraic multi-grid method, Application of McCormack technique to compressible flows: case study- Supersonic flow through convergent-divergent nozzle: Governing equations, numerical method, boundary conditions, case set-up and results, Tutorials on McCormack method, Coding practice for Jacobi method.

#### Unit-4 - Solution Techniques for Elliptic and Parabolic Equations

9 Hour

Application of relaxation techniques to potential flow equation, Application of Alternating Direction Implicit method to unsteady two-dimensional heat conduction, Techniques for incompressible Navier-Stokes equations: Concept of staggered grid., Pressure correction method, SIMPLE algorithm and boundary conditions, Solution of Couette flow using SIMPLE algorithm

#### Unit-5 - Introduction to Turbulence Modelling

9 Hour

Concept of Turbulent boundary layer over a flat plate: Laminar sub, logarithmic and outer layers, Concept of turbulence, Reynolds averaging, Time averaged equations for turbulent flow, Boussinesq approximation, Types of turbulence models: Prandtl mixing length, One-equation, Two-equation models, Comparison of different turbulent models, Energy cascade mechanism in turbulent flows, Advanced methods: Large Eddy Simulations, Direct Numerical Simulations, Detached Eddy Simulations

Unit-1 - Energy Storage

9 Hour

Paging of Energy storage and its two a Forgy storage by machanish and sharing lending. High temporature thermal storage and track and two of Thormal Energy Storage (TES) Scorage (Source)

Basics of Energy storage and its types, Energy storage by mechanical and chemical medium, High temperature thermal storage systems, Necessity and types of Thermal Energy Storage (TES), Seasonal (Source) TES technologies - aquifer, borehole and cavern, Thermal storage- energy piles, sea water, rock and roof pond.

# Unit-2 - Thermal Energy Storage Systems

9 Hour

Thermal energy storage materials - Classification, Thermophysical properties, Selection of sensible thermal energy storage materials and methodologies, Properties of sensible heat storage materials, Sensible cooling and heating load calculations, Passive solar heating storage, Active solar heating storage, Heat transfer fluids and properties, Selection of heat transfer fluid for heating and cooling applications

# Unit-3 - Sensible, Latent Thermal and Thermochemical Energy Storage Systems

9 Hour

Sensible and Latent Thermal Energy Storage (STES/LTES) system and its types, Encapsulation techniques of LTES (PCM) materials, Performance assessment of LTES system in building, Thermochemical energy storage principles and materials, Thermochemical energy storage systems - open adsorption energy storage system and closed adsorption energy storage system, thermochemical energy storage system and thermochemical accumulator energy storage system.

### Unit-4 - Modeling Aspects of Thermal Storage System

9 Hour

Mathematical models, Principles, Types, Flow Diagram, Optimal Systems solution of set of nonlinear algebraic equations - successive substitution - Newton Raphson method- examples of thermal systems simulation, Simulation of thermal processes, (Stefan's method, enthalpy porosity method, apparent heat capacity method

# Unit-5 - Modeling of Components in Thermal Storage System

9 Hour

Modeling of heat exchangers, Evaporators, Condensers, Absorption and rectification column, Solar collectors, Thermal Energy storage, Case studies for TEST

Unit-4 - Electric Vehicle Aerodynamics

9 Hour

Electric vehicle and types, Components of Electric Vehicle, EV aerodynamic parts – front end – upper body – rear end – under body – wheels, Air curtain, Wheelhouse ventilation, Front spoiler/Splitter package, Underbody vanes, Diffuser extension, Roof and trunk spoiler extension, Consideration of Vehicle Speed and mass, Power requirement to overcome aerodynamic drag.

Unit-5 - Sports Vehicles Aerodynamics

9 Hour

Various components – Splitter – Hood vents – NACA ducts – Diffuser – Spoiler, Vehicle dynamics, Role of inverted airfoil shape, Various aerodynamic forces, Pressure distribution, Role of Speed and Mass, Stall, Flow over wheels, Tyer performance, Effect of aerodynamics performance on speed.

# Unit-1 - Green Energy and Environment

9 Hour

The concept of green Energy; evolution; nature, scope, importance and types; Green energy sources- green energy carriers-hydrogen, biofuels, etc. Life cycle analysis, Carbon foot print, Carbon sequestration, Carbon disposal, Carbon trading, Climate neutrality, climate change

# Unit-2 - Solar Energy Systems

9 Hour

solar collectors and evacuated tube sola<mark>r collecto</mark>rs, solar water heating systems, design and their applications - space heating and space cooling systems and an economic comparison between solar water heater, electric heater and gas-fired water heater for hot water supply Solar Photo Voltaic -characteristics of solar cells under lighting are analyzed, output parameter, and impact of module and array output, Application of building-integrated photovoltaic system (BIPV) and system design. Field visit: Testing of Solar thermal collectors, solar water heater (flat plate type), Solar box cooker, Solar air heater, and solar concentrator for high temperature applications, Solar PV panel performances

# Unit-3 - Energy Wind Energy Technology and Micro Hydropower( MHP)

9 Hour

Environmental impact- Noise and Life cycle Greenhouse gas emissions, Power and Energy of wind- Coefficient of Performance-Aerodynamics, Wind characteristics, Turbine performance, Levelized cost of energy for a wind turbine, Wind farms- offshore, Onshore Introduction to MHP system design, Planning concepts, Evaluation of MHP requirements, Power from water, System components of Mini and Micro Hydropower, Micro Hydropower plant in India. Potential Hydropower plant projects identified in India

### Unit-4 - Green Hydrogen

9 Hour

Primary Sources of green energy for Hydrogen production - Hydrogen Demand – Characteristics of Hydrogen. Electrochemical water splitting – Electrolyzer or electrolytic cell –Faraday's law – Faradaic efficiency – Energy efficiency of water electrolysis cells- Classification of electrolyzer. Global green hydrogen market- Green hydrogen projects and its applications

# Unit-5 - Energy Environment Interaction Energy Economics

9 Hour

Embodied energy, Environmental impact , Tolerance, Impact Assessments, Unit cost of energy , Societal and Environmental cost, Life cycle assessment ( LCA), Energy return on Energy invested, Greenhouse gas accounting, Carbon tax

# Unit-1 - Introduction to Optimization

9 Hour

Introduction, methods, engineering applications of optimization Statement of an optimization problem-classification of optimization problems. Single variable optimization Multivariable optimization with no constraints-Multi variable optimization with equality and in equality constraints problems on maximum and minimum values of the function and an inflection point, design of a thin wall tray with minimal material

# Unit-2 - Unconstrained Nonlinear Optimization

9 Hour

Region elimination methods: Unrestricted search, Dichotomous Search, Fibonacci method, Golden Section method Random search Univariate Method Gradient search

# Unit-3 - Multivariable Unconstrained and Constrained Optimization.

9 Hour

Direct search methods: Random jumping method, Random walk method Tutorials on Random Jumping Method Direct search methods: conjugate gradient method, quasi- Newton methods - Indirect methods - Penalty function method Geometric Programming - Posynomial-Unconstrained Primal Dual Relation Ship And Sufficiency Condition In The Unconstrained Case

# Unit-4 - Modern Methods of Optimization

9 Hour

Genetic Algorithm Introduction Basic elements of natural genetics—reproduction, crossover, and mutation The computational procedure involved in optimizing the fitness function in genetic algorithm Tutorials on Genetic Algorithm. Simulated Annealing: Introduction to Ant Colony Optimization particle swarm optimization problems

### Unit-5 - Optimum Design of Machine Elements

9 Hour

Optimum design of machine elements Design optimization of springs Objective function for springs Design optimization of shafts and torsionally loaded members Design vectors for torsionally loaded members Design designing the rectangular column

Unit-1 - Flexible Drives 9 Hour

Belt drives: types, selection of belt drives-Belt materials and applications-Selection and problems on flat belt drives using fundamental equations-Selection procedure and problems on flat belt drives using manufacturer's data, Selection procedure and problems on V-belt drives using fundamental equations-Selection procedure and problems on V-belt drives using manufacturer's data, Wire ropes: types, construction and Selection of wire ropes-Stresses in wire ropes-Selection procedure for wire ropes-Problems on wire ropes, Power transmission chains: types and applications-Selection procedure on power transmission chains and sprockets-Problems on power transmission chains and sprockets

# Unit-2 - Bearings

9 Hour

Hydrodynamic journal bearings-Sommerfeld Number, Raimondi and Boyd graphs-Bearing materials, properties required for bearing materials, System of lubrication-Selection procedure and problems on journal bearing, Roller contact bearings-Types of bearing, Load rating, bearing materials and bearing failure- selection and problems on ball bearings

#### Unit-3 - Friction

9 Hour

Friction-types, laws of solid and dry friction, limiting angle of friction-single plate clutch- theory and problems, multi plate clutch- theory and problems, cone clutch- theory and problems, cone clutch- theory and problems, priction in brakes- types-block or shoe brake- theory and problems, band and block brake - theory and problems, internal expanding shoe brake.

#### Unit-4 - Power Screws

9 Hour

Types of Screw Threads used for Power Screws-Multiple Threads-Torque Required to Raise Load by Square Threaded Screws-Torque Required to Lower Load by Square Threaded Screws-Efficiency of Square Threaded Screws-Threaded Screws-Efficiency of Square Threaded Screws-Effici

# Unit-5 - Automotive Transmission Systems

9 Hour

Fluid coupling-principle of operation-working and constructional details of fluid coupling-torque capacity-performance characteristics of fluid coupling-reduction of drag force in fluid coupling and types-problems on fluid coupling, Torque converter-principle of operation-constructional details of single phase torque converter-difference between fluid coupling and torque converter-performance characteristics of torque converter, Automatic transmission-block diagram-components-construction and working of hydraulic control system-advantages, limitations and applications

Unit-1 - Introduction 9 Hour

Introduction of micro machining process, Mechanical Micro machining; micro turning, micro milling, Ultra Sonic micro machining, Chemical and Electro Chemical Micro Machining, Bio Machining,

### Unit-2 - Thermal Micro Machining

9 Hour s Flectro

Introduction of Beam Energy based micro machining; Electron Beam, Laser Beam, Electric Discharge, Ion Beam, Focused Ion Beam and Plasma Beam Micro Machining. Hybrid Micro Machining Processes, Electro Chemical Spark Micro Machining (ECSMM).

# Unit-3 - Nano Polishing

9 Hour

Nano Polishing of Abrasive Flow finishing; Magnetic Abrasive Finishing, Magneto Rheological Finishing, Magneto Rheological Abrasive Flow Finishing, Magnetic Float Polishing. Elastic Emission Machining, Chemo-Mechanical Polishing

# Unit-4 - MEMS

9 Hour

Micro- Electro- Mechanical Systems, Lithography, Doping, Ion Implantation, Silicon Oxidation, Crystallography, Etching, Physical vapor deposition, Chemical Vapor deposition, Biotechnology integration, Optical MEMS

# Unit-5 - Metrology , Characterization and Applications

9 Hour

Metrology of micro machined components, challenges in measuring Micro machined components, CMM, Interferometry, Laser interferometry, SEM, TEM, EBSD, Fabrication of Microelectronic Devices, Dimensional Metrology for Micro/Mesoscale Manufacturing, Generalized applications

# Unit-1 - Introduction to Machine Vision and Fundamentals of Image Acquisition

9 Hour

Review of existing machine vision systems-Binary, gray vision system- industrial applications-basic functions of machine vision system- Elements of visual perception, structure of eye-Image acquisition and digitization, sensing, Illumination and its types, point sensor, line and plane sensor- CCD and CMOS Cameras, Representing Digital Images, Spatial and Intensity Resolution, Problems on quantization and sampling, Practice on reading image and exercise on spatial resolution and sampling

# Unit-2 - Low Level Vision and Image Enhancement

9 Hour

Relationship between pixels: connectivity, distance measures- mean, median Filtering, - Smoothing of binary images-Histogram equalization- frequency domain - Basic steps in frequency domain filtering- Low pass filtering, Ideal low pass filter, Butterworth low pass filter, Image sharpening, Butterworth filters - Generation of spatial masks from frequency domain specification, Practice on image filtering

### Unit-3 - Image Segmentation and Feature Extraction

9 Hour

Thresholding, Edge detection, gradient operators, Laplacian operator, HOG and SIFT -region based segmentation, boundary descriptors , Chain code, Fourier descriptors, Region descriptors, Texture analysis, Practice Problems based on feature extraction

### Unit-4 - Object Recognition and Image Correlations

9 Hour

Object recognition, Approaches to Object Recognition, structural methods, matching shape numbers, string matching- Digital image correlation- Algorithms, Strain measurement in tensile testing- Fracture behavior-3D Vision- Motion analysis

# Unit-5 - Deep Learning and Artificial Intelligence in Image Processing

9 Hour

Image Features - Artificial Neural Network for Pattern Classification —CNN- Introduction to Deep Learning -Applications of Deep Nets: Image segmentation, Object recognition, Transformation invariant recognition.

Visual Tracking with Deep trained nets; Bayesian Belief Networks for Semi-supervised learning. Recurrent NN

# Unit-1 - Introduction to Quality, Customer Focus and Cost of Quality

9 Hour

Evolution of Quality - Definition of Quality - Dimensions of Quality - Quality policy - Quality objectives - McKinsey 7s model - Contributions of Deming, Juran and Crosby - Customer requirements, Meeting customer needs and expectations, Customer satisfaction and Understanding customer behavior, Customer value evaluation, Case studies, Kaizen – Problem solving- Cost of quality, Categories of cost of Quality, Models of cost of quality

### Unit-2 - Quality Control Tools and SQC

9 Hour

Quality control tools – Check sheet, Histogram, Pareto chart, Cause & Effect diagram, Scatter diagram, Control chart. Statistical Quality Control - Acceptable Sampling, Sampling methods, Probability based sampling, Acceptance sampling plans. Control Charts – X bar, R, p np -simple problems- Process Capability. Six Sigma Techniques – case studies

#### Unit-3 - Reliability and Maintainability

9 Hour

System reliability- Series, Parallel and mixed configuration, Problems, Weibull distribution and application. Mean time to repair, Mean time between failures, Predictive maintenance, Reliability Centered Maintenance, Reliability improvement – Redundancy - Unit and stand by redundancy – Maintainability and availability – System downtime – Reliability and Maintainability trade off – Simple problems

# Unit-4 - Quality Management System and Benchmarking

9 Hour

Quality Management Principles, ISO 9001, ISO 9000:2000, ISO 14000, Quality Audits, ISO Registration, Requirements, Benefits of ISO registration, Examples of ISO Standard Application – Benchmarking - Definition Reasons, Types, Process, Advantages and Limitations. Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio.

# Unit-5 - Employee Involvement, Team Building and Quality Awards

9 Hour

Importance of Employee Involvement, Empowerment, Motivation & Theories of Motivation, Recognition and Reward, Suggestion System, Teams in Organizations - Quality Awards - Malcolm Baldrige National Quality Award, Deming Prize-categories-criteria-committee, Rajiv Gandhi National Quality Award. Concepts of Quality circle

# Unit-1 - Thermal Power Generation 9 Hour

Introduction- Plant types, Captive and central plant, Site selection, Plant layout and working, Coal and ash handling, Fuel burning - Furnace, draught system

### Unit-2 - Diesel, Gas Turbine and MHD Power Plants

Diesel power plant- site selection, Main components of the Diesel power plant, working principle of Diesel power plant engine. Gas turbine power plant-Open cycle, closed cycle, Gas turbines with intercooling and reheating, Combined cycle power plant, Cogeneration-Classification, Factors influencing cogeneration, technical parameters for cogeneration, Merits and Demerits, Applications in industry, Caste study. Waste heat recovery system, MHD power plant-working principle, Classification, MHD systems, parameters governing power output.

Unit-3 - Nuclear Power Plant 9 Hour

Introduction- Site selection, fission and fusion reaction- chain reaction, fertile and fissile materials, layout of nuclear power plant-reactor components and working principle, types of reactors: Boiling water reactor, pressurized water reactor, sodium-cooled reactor, gas-cooled reactor, fast breeder reactor-Third Generation Reactors – Fourth Generation Reactor Design and Concepts Relative merits and demerits, nuclear fuels-Enriched uranium-Enrichment techniques, slow neutron breeder reactor, advanced reactor design, waste disposal-solid, liquid and gaseous waste, safety measures.

# Unit-4 - Renewable Energy Conversion Systems

9 Hour

9 Hour

Introduction- Site selection, wind turbine plants-Types, design and development, OTEC - Ocean Thermal Energy Conversion for Open and closed Systems, solar, solar photovoltaic, concentrated collector plant, tower concept, pumped storage plant, Fuel Cell - Types of Fuel Cells - Polymer electrolyte membrane fuel cells - Solid oxide fuel cells, Biomass - Sources of biomass - Pyrolysis, combustion and Gasification: Fluidized Bed Gasifier, Fermentation and digestion process: Floating Digester Biogas Plants, hybrid plant-types.

#### Unit-5 - Power plant Economics, Emissions and Control

9 Hour

Introduction- Capital, fixed, operating, variable cost, Factors-load, demand factor, Tariff methods, cost of power generation. Emissions from Power plants-Air pollution, water pollution, control measures for Pollutants, Pollution standards, greenhouse effects and global warming.

# Unit-1 - Introduction to Sustainable Energy Systems

9 Hour

Sustainability principles, context for sustainable energy, sustainability considerations, challenges in sustainability, energy efficiency, environmental impact of energy systems, solar radiation balance, climate change Unit-2 - Solar Energy

9 Hour

Solar radiation and its measurements- types of solar thermal collectors, solar thermal applications -water heaters- solar stills - solar pond- solar refrigeration and air conditioning-solar dryer-solar cookers - solar furnaces- solar thermal power generation. Solar photovoltaic systems- working principle- components - applications

Unit-3 - Wind Energy 9 Hour

Wind energy, -principles -components of wind energy conversion system- wind data, site selection and energy estimation. Types -Horizontal axis- vertical axis. Aerofoil theory-aerodynamic forces acting on the blade, performance of wind turbines, hybrid energy systems (solar and wind), environmental issues of wind energy, offshore wind plants

# Unit-4 - Ocean and Geothermal Energy

9 Hour

Wave characteristics and wave energy conversion systems, Tidal energy and its types. Estimation of energy and power in single basin tidal systems. Ocean thermal energy conversion open & closed system. Exploration of geothermal energy- Geothermal power plants-Challenges, availability, geographical distribution.

# Unit-5 - Sustainability Practices

9 Hour

Energy Conservation, Energy Storage - thermal & electrical, Carbon-di-oxide technologies- refrigeration and carbon capture technologies, Hybrid Renewable Energy Systems, Distributed Energy Systems, Duck curve

Course C	Outcomes (CO):  At the end of this course, learners will be able to:	Eng ii	Prob	Designation Solution	Conc	Mode	The e	Envir Susta	Ethic	Indiv	Com	Proje	Life L	PSO	PSO.	PSO
CO-1:	describe basic sustainable waste management and its effect on environment					-	-	2	-	-	-	-	-	3	-	-
CO-2:	explain solid waste management technologies, recovery & recycle of waste	3	1	7.1	44	7-		-	-	-	-	-	-	3	-	-
CO-3:	discuss the nature of logistics and supply chain management and its strategies	3	10.70	1-5	2	-		_	-	-	-	-	-	-	-	-
CO-4:	explain the waste management processes in the field of industrial, agricultural and clinical wastes	2	25.0	7.53	1	-		3	-		-	-	-	2	-	-
CO-5:	discuss the social and e <mark>conomic</mark> impacts on the waste management	1	٠	1	X	-		3	2		-	-	-	-	-	- 1

relopm relopm restig problic or Use rer and ity

Unit-1 - Waste Management

Waste Management in India – Hierarchy of Sustainable Waste Management – Current Waste Handling Practices in India: Composting or Mechanical, Biological Treatment, Reuse Derived Fuel, Waste-To-Energy Combustion- Improper Waste Disposal – Method to Reduce Food Waste (SUSTAINABLE)

### Unit-2 - Solid Waste Management (SWM) Technology

9 Hour

Classification—Waste Management — Waste Operational Units: Equipment and Facilities, Collection and Transportation, Treatment: Mechanical and Biological — Mixed SWM: Biodegradable, Packaging, Vehicles, Scrap, Electrical and Electronic Equipment, Construction and Demolition Wastes — Recycling Process (Policies)

# Unit-3 - Logistics and Supply Chain in Waste Management

identify the methods for waste management of industrial, agricultural & clinical wastes

9 Hour

Logistics and Supply Chain, Suitability in Freight Transport, Warehouses, Product Design with Cleaner Production — Nuclear Waste – Agricultural Waste Management, Biogas – Clinical Wastes: Disinfection, Electron Beam for Sterilization — Electronics, Vehicle, Battery, SPV Waste Disposal, Recycling – Site Visit

### Unit-4 - Industrial Waste Management

CLR-4:

9 Hour

Solid, Water and Air Pollution by Industrial Activities – Waste and its Sustainable Disposal in Industry: Sugarcane, Metal, Textile, Cement, Plastics, Electronics - Waste Management for Industrial Estates, Infrastructure Development

### Unit-5 - Economic and Social Concerns

9 Hour

Environmental Pollution in Indian Cities: Health Issues – Waste Management Cost and Revenue – Socio-Economic Concerns - Performance of Existing System – Indian Government Policies and its Efforts, Waste Management Organizations – Case Studies
